Toy Store

Our Agenda

Dataset

Data Overview, Data Structure, ETL , Modeling, Key metrics analysis & visualization.

Mission & Objective

Our mission & Primary objective

Sales Dashboard

Presenting Dashboard & concluded insights

Toy Store

About Dataset

- Sales & inventory data for a fictitious chain of toy stores in Mexico called Maven Toys, including information about products, stores, daily sales transactions, and current inventory levels at each location.

Data Overview

Calendar Table

•This table includes all relevant dates, allowing for time-based analysis of sales trends and performance metrics.

Inventory Table

•Contains information on the stock levels of toys available at each store.

Products Table

•Lists all products available in the store, including their categories, costs, and prices.

Sales Table

•Captures transaction details, including sales dates, quantities sold, and associated stores.

Stores Table

•Contains details about each store location, including its name, city, and operational status.

Data Structure

Calendar	Inventory	Sales	Products	Stores
Key Fields: Date	Key Fields: Store_ID Product_ID Stock_On_Hand	Key Fields: Sale_ID, Date Store_ID Product_ID Units	Key Fields: Product_ID Product_Name Product_Category Product_Cost, Product_Price.	Key Fields: Store_ID Store_Name Store_City Store_Location Store_Open_Date.

ETL

Extract

Data extracted from Maven Analytics with csv format

Transform

Perform transformations like:

- Filtering rows (e.g., removing nulls or irrelevant data).
- Replacing values (e.g., handling missing data).
- Splitting columns or merging columns.
- Pivoting/Unpivoting data for better structure.
- Grouping data for aggregations (sum, count, etc.).
- Data Type Conversion: Ensure correct data types (e.g., dates, decimals).
- Adding custom columns with calculated fields using Power Query's M language.

Load

After transformation, load the cleaned data into Power BI's data model for reporting.

Data Modeling

After ETL, Power BI allows you to create relationships between tables, define measures, and optimize the data model for analysis:

- **Create relationships** between different data sources (e.g., fact and dimension tables).

Key Metrics to Be Analyzed

- Sold Units
- Previous Month Metrics
- Profit
- Orders
- Adjusted Price
- Revenue
- Adjusted Revenue
- Adjusted Profit
- Average Retail Price
- Stock on Hand
- Sold Units
- Store Count
- Profit Margin
- Previous Month Metrics
- Total Cost

Key Visualization

- Sales Performance
- Inventory Analysis
- Profitability Analysis
- Comparative Metrics

Toy Store

Our Mission

- we aim to maximize customer satisfaction and profitability through effective inventory management and targeted sales strategies.

- Is to provide high-quality, engaging toys that promote creativity and learning in children. With multiple stores across various locations.

Objectives of the Analysis

Sales Performance Evaluation

To assess overall sales trends and identify peak sales periods, particularly around holidays and promotional events.

Inventory Management

To analyze stock levels across different stores, ensuring that popular items are adequately stocked while minimizing excess inventory.

Profitability Insights

To evaluate profit margins across different product categories and identify best-selling items that contribute significantly to overall revenue.

Comparative Analysis

To compare current month performance against previous months, helping to identify growth trends and areas for improvement.

Toy Store

Dashboard

Key findings:

- Overall sales and profit growth
- Strong performance of specific product categories and stores
- Opportunities for inventory optimization

Overall Performance

Key metrics:

- Total sales
- Total revenue
- Total profit
- Profit margin

Highlight:

- Growth trends and stability of profit margin

Product Performance

Key metrics:

- Units sold
- Revenue
- Profit margin

Highlight:

- Top-selling categories and products

Store Performance

Key metrics:

- Revenue
- Store count

Highlight:

- High-performing locations and potential areas for improvement

Inventory Analysis

Key metrics:

- Total inventory cost
- Average profit margin
- Total stock on hand

Highlight:

- Inventory management challenges and opportunities

Conclusions and

Key Findings:

Recommendations

- **Art & Crafts:** High sales volume, potential for further growth.
- **Colorbuds:** Best profit margin, ensure adequate stock and marketing.
- **Inventory Management:** Optimize practices to reduce costs and avoid stockouts.
- **Downtown Success:** Identify factors driving sales and replicate in other locations.
- **Toluca 1:** Analyze success factors and apply lessons to other stores.

Recommendations:

- **Promote Art & Crafts:** Introduce new products, create bundles.
- **Focus on Colorbuds:** Ensure ample stock, feature in marketing.
- **Optimize Inventory:** Review management practices, avoid overstocking.
- **Learn from Downtown:** Analyze factors driving success, replicate in other locations.

THANK YOU

For Your Attention
